

# On a scale of 1 to 10, how important is fast turnaround on your medical device components?

**10 parts  
in  
10 days**

## We thought so.

Saint-Gobain's **10 in 10 Rapid Prototyping program** can help you get new medical devices to market faster. We understand the importance of rapid turnaround during the device development phase. Our **10 in 10 program** delivers that speed – along with the commitment to quality you expect from the **world leader in silicone molding**.

We bring your drawings to life, creating dimensionally accurate, fully functioning silicone components that enable you to test your design throughout the pre-production phase. In fact, for many simple designs\* we can manufacture **10 parts in 10 business days or less**.

**Feel confident in your part design.** For more complex parts, our experienced team draws on a high level of engineering and material knowledge. We will make sure the part meets your requirements and is optimized for manufacturability

\*More complex parts may require additional time.

## Credits available

Apply the cost of rapid prototyping toward the cost of your production tooling.
